Word cloud « Analytics » (Wikipedia) https://www.wordclouds.com/

The shortest path problem: find the fastest path, based on quantifiable / measurable information

Examples: descriptive, predictive and prescriptive business analytics

	Descriptive Analytics Assign	Predictive Iment Project Exam Help	Prescriptive Analytics
	What happened?	What will likely happen?	How should we act?
Marketing	How many sales did marketing campaign A generate?	How many sales will marketing campaing 8-generate?	How should we organize the next marketing campaign to maximize sales?
Finance	How much annual return did mutual fund A generate the last 5 years?	How much annual return will mutual fund B generate next year ?	Which mutual funds should be positioned in a portfolio to maximize the expected return?
Production planning	What were the customer demands for product X in region A throughout the last 12 months?	What customer demand can we expect for products X and Y in region B next month?	How many units of products X and Y should we produce to maximize total sales profit?

Operations Research (OR)

OR is part of analytics: prescriptive analytics

Several definitions:

https://powcoder.com

- OR is the discipline of scientific methods week to make better decisions.
- OR proposes conceptual models to analyze complex situations and enables decision makers to take efficient decision.
- OR is a discipline at the intersection of mathematics, economy and computer science.
- OR is naturally related to the industry and plays a vital role in its competitiveness..

Operations Research (OR)

- Objective:
 - Propose decisions to make the best with our available means.
- This assumes that we are Assignment Project Exam Help
 - Take measurements
 - According to certain performance the sator powcoder.com
- Indicators:

Add WeChat powcoder

- Costs
- Profit
- Service quality
- Customer satisfaction

 product offer diversity
- by adjusting the decision variables dd WeChat powcoder production quantity of product x frequency of bus 51 between 7h00 and 9h00 number of salespersons to hire
- and respecting the constraints and requirements do not exceed the available budget hire at least one sales person per department respect the maximum capacity of available resources

Implementation of an optimization model - Who has the last word?

- The manager!
 - She defines the mandate of the « consultants » (internal or external)
 - She interacts with them to elaborate the model
 - She validates the results

Assignment Project Exam Help

- Analytics is an essential "tool box" of future managers
- The manager needs to understand the tips of payer of er com:
 - Model the problem
 - Solve the model
 - Analyze the solution

Add WeChat powcoder

In order to be able to

- Discuss with the consultants, understanding the important details and be able to judge whether the project was a success, or not.
- Understand which data is required to nourish the model and to make efficient decisions.

Objective of the course:

Enable the students with the tools to play such a role.

Cours objectives

The objective of the course is to introduce to the student a systematic **methodology to provide decision support** to complex planning problems. After the course, students should know how to use such methodology in order to model some of the most common planning problems, i.e., those that are often found in planting problems. It is the about the planning problems of the most common planning problems, i.e., the about the planting problems of the most common planning problems.

- 1) Understand the role of decision making technologies in an enterprise, know its possibilities and its limitations, and be able being the weak the which optimization models can be useful.
- 2) Be able to identify and structure an optimization model given a planning context, i.e., identify the decision variables, the necessary constraints, the objective function and choose a judge the appropriateness of a solution method.
- 3) Have an understanding how to **analyze the proposed solutions** to conclude whether those are feasible in practice, and how to estimate whether such optimized solution is effectively more efficient than current planning practices.

Introduction of the lecturer

- Sanjay Dominik Jena Associate professor, Department of Analytics, Operations and Information Technologies, ÉSG UQÀM
- Experience / training::
 AXA Insurances; B.Sc. Comp S. Signment Project Rib, Ph. R.D. (Perm); Postdoc. (MIT SMART)
- Expertise and research interests: https://powcoder.com
 Operations research; mathematical operations

 - Optimization under uncertainty
 - Data science and machine learning Add WeChat powcoder
 - Applications: logistics and transportation; facility location; revenue management; project management
- Affiliation to research centers:
 - Interuniversity research center for entreprise networks, logistics and transportation (CIRRELT)
 - Excellence research chair in Data Science for Real-time decision making
 - Research center for intelligent² management of complex systems (CRI²GS)
- Industrial partners:
 - BIXI, Netlift, Cascades, JDA Labs, FPInnovations, GAPSO Analytics

Course plan

- Session 1 Introduction & LP
 - watch videos
 - 20h00 -22h30: live course / Assignment Projector Proje
- Session 2 Network models
 - watch videos
 - 20h00 -22h30: live course / Q & A
- Session 3 Integer programming
 - watch videos
 - 20h30 -22h30: live course / Q & A
- Session 4 Revision
 - 20h30 -22h30: live course / Q & A
- Final exam (individual)

Evaluation

- Exchange of information between teams
- https://powcoderprectiganfor not allowed
 - Any type of plagiat or cheating: course failed
